Subject: RE: Shopify/Syspro Link

Hi Sarah,

I'll look through the details and confirm on the dates this afternoon.

1. I could do with speak to you about ERP-driven promotion synchronisation into Shopify – I just want to check my understanding on what you mean by this please This is the trades and promotions module. For phase one, it is proposed that the pricing will be stored in Shopify not SYSPRO. However, if we can include it in phase 1 then we will. We could not test this until we could access your test data.

I really need to understand it fully, out limitations and opportunities as our aim is to use promotions to a great extent to improve the success on products through this channel.

Regards,

Liz

Subject: RE: Shopify/Syspro Link

Hi Liz,

Please find attached quotation for visit, terms & conditions and my new customer welcome pack.

Does the t&cs document cover enough in terms of NDA? If not, I will put one together.

I know that you would prefer me to visit on a Tuesday or Thursday and so my availability currently is 12th, 17th or 19th March.

With regards to your questions on the scope, please see below responses in red.

On another note, Herman is already working on getting some meetings set up for us with Bighams, Rocket Medical and Kevin Dherman (SVP of Innovation at Syspro).

Kind regards

Sarah

Subject: RE: Shopify/Syspro Link

Thanks Sarah,

Are you able to send over the NDA and your available dates for a visit also?

Just a few queries on the scope:

1. I note you point on not “real time”, but therefore what is the delay? As stated below, I anticipate it be every minute or so. In reality, it can be every second, but that may put too much strain on your server, so we will work with you to find the best balance between shortest/least strain timings. It is just a technicality really because even if we sync every second, it is still not technically “real-time”.
2. I presume you will advise on the hosting requirement soon so we can manage that requirement ahead of the go-live? The bigger question really was whether you already had anything else hosted that we could piggy back on. If not, I will send some suggestions over this evening.
3. ERP-driven promotion synchronisation into Shopify – I just want to check my understanding on what you mean by this please This is the trades and promotions module. For phase one, it is proposed that the pricing will be stored in Shopify not SYSPRO. However, if we can include it in phase 1 then we will. We could not test this until we could access your test data.
4. Are we on target for 31-3-26? We will need to set-up a warehouse and transfer stock ahead of this, guidance on this to ensure suitability would be helpful please. Yes, we are on target for 31st March still. Yes, I will help with this as part of the configuration.

Regards,

Liz

Barbecues can be a fire hazard, especially in windy, dry conditions.
Pick your spot wisely and always comply with public safety protection orders, that may prohibit the use of Barbecues.
Always extinguish the Barbecue, let it fully cool and recycle responsibly.

Subject: RE: Shopify/Syspro Link

Good morning Liz,

I hope you have had a lovely weekend.

As discussed, please find attached a formal scope of works that I believe covers the requirement for the Shopify integration for your review.

I have also attached a shorter “Board friendly” version in case it is of use.

One thing to note – the scope states that the integration is not “real-time”.

This is only because we would be sending/receiving data every minute or so, and therefore technically not real-time (although very close).

Hopefully the document aligns with your expectations but if I missed/mis-understood anything, please let me know and we can discuss/amend.

Kind regards

Sarah

Hi Sarah,

This is were we got to with Les, then we started talking about 3PL integration, that however can be Q3, Q4 or Q1 2027.

I'll look through your proposal now.

Thanks,

Liz

Cc: Kelvin Tebbs <kt@codelessplatforms.com>
Subject: RE: Shopify/Syspro Link

Hi Liz,

1. The flow starts with a customer placing an order on Shopify with payment.
2. BPA retrieves new orders into its staging database
3. BPA posts the order to SYSPRO using the SORTOI Business Object. The BO ensures that orders posted follow the same rules as if an order was entered manually in SYSPRO. We would mimic that way you do orders currently. Business rules will be established for handling products/warehouses and customers.
4. Once a Sales Order is shipped in SYSPRO then the fulfilment information can be uploaded to Shopify if required.
5. We always maintain SYSPRO as the source of truth.

I have attached 2 sample flowcharts of other ecommerce to SYSPRO integrations that I've done. Although similar we will map directly to your needs. That is what the detailed scoping exercise is for.

To move onto that we'll need to present you with a high-level budget document. Once signed and a deposit is received we can schedule in the project for resources and timeline.

I'm happy to show you a working model of this if you haven't seen one already.

Regards,

Les

Subject: RE: Shopify/Syspro Link

Hi Les,

Thanks for the detail. I would like initially to talk through the data flow and ideally plot that out. Whilst we may have the one warehouse initially, it may be that we have multiple (located in different geographical locations) further down the line and I want to ensure any development we do now will stand up to that. Also I am not clear exactly how the data/ communication flows once the order is received back into Syspro, i.e. updates to customer on shipping/tracking etc. Or does this run in Shopify? And if we have multiple warehouses how do we managed that through to invoice?

I'm not sure how best to proceed? Until I am clear that we can do the full data linking and how, I'm uncomfortable committing to the full scope of the project.

Best Regards,

Liz

Subject: RE: Shopify/Syspro Link

Hi Liz,

Just to give you a sense as to how a proposal looks and how the hours add up here is a snippet from a proposal I'm preparing for you. (below)

Note that this is just an estimate and that the actual development time is 35 hours. We need to do a detailed scope document too especially with the pricing and payment discussions we've had. The detailed scope also allows us to better pin down the budget.

BTW, you are billed for actual hours in the end, but I usually do not go over the lower end of the range historically unless there are unknown changes we discover.

A final scope document will be prepared by Codeless Platforms and agreed to by Rectella before the beginning of development.

The process and milestones are broken down as follows with estimated hours for each.

Task	Estimated Hours (Range)
1. **Detailed Scoping and Design**	5 – 8 Hours
2. **Development**	35 – 45 Hours
3. **UAT Testing & Quality Assurance***	3 – 5 Hours
4. **Deployment and Go-Live***	3 – 4 Hours
5. **Training and Documentation**	2 – 3 Hours
6. **Post Go-Live Support (30 Days)**	2 – 4 Hours
7. **Project Management**	2 – 3 Hours
Total Estimated Hours**	52 – 72 Hours

Hourly rate is $250.00 yeilding a project estimate range of £13,000 - £18,000. A deposit of £6,500 is required before beginning the project.

Hope this helps clarify.

Regards,

Les

Hi Liz,

Ballpark would be £13,000 – £18,000.

Generally, start time is about 6 weeks out from receipt of the deposit which is 50% of £13,000 but that's up to the Project Management Office who schedules the projects.

I can generate a quote if you like.

Hi Liz,

So we can pretty much do anything you need. Just need to design the process.

The Sales Order in SYSPRO will need to be an invoice before the payment can be processed against it. As long as the timing all works out we can use the financial info from Shopify from the bank report to post transactions in A/R.

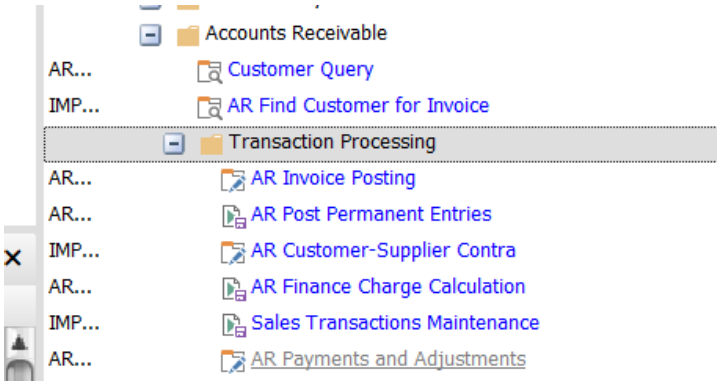
Hi Les,

I mean through accounts receivable menu as per below:



Does the recon report that you produce post the payment transactions through this in Syspro or is it on off line report that the administrator uses to post the payment? Have you an example if offline as what additional does it provide over the Shopify reporting on this?

Regards,

Liz

Subject: RE: Shopify/Syspro Link

Hi Liz,

Payments are usually handled through one of Shopify's approved payment processors. The payment method and amounts are available through the download of the order from Shopify. You can have multiple payment methods in Shopify. One of my customers uses Shopify Payments and they automatically deposit to their bank account weekly. I produce a reconciliation report(CSV) from them that combines the one you can download from Shopify with SYSPRO data.

My part is to record it in SYSPRO the way you want it. You mentioned SYSPRO Debtors and Bank. Is that the same as the Cash Book Module?

You'll need to go into your Shopify admin and choose a credit card payment gateway. I think you can do Apple or Google Pay, Paypal, Affirm etc.

If you can show me where in SYSPRO you'd like that information to appear I can figure out what business objects may be necessary.

Hi Les,

Can it manage the following:

1. Was £500 now £400
2. £x or x% off
3. Buy X get 1 free, so 4 for 3 or 3 for 2
4. Bundle i.e. buy salt, Lump 4kg and something else for a £x or with 5% off.

Subject: RE: Shopify/Syspro Link

Yes you are correct. The Pricing Engine is limited to the following:

The Price Rules API enables the creation and management of discount codes that can be applied to products, collections, or customer groups. Key pricing variations include:

- Percentage-Based Discounts: Apply a percentage off (e.g., 10% or 25%) on specific products, collections, or the entire cart. For example, you can offer 20% off all apparel for first-time buyers.
- Fixed Amount Discounts: Deduct a specific dollar amount (e.g., $10 off) from the cart total or specific items. This is useful for promotions like "$5 off your first order."
- Buy X Get Y (BOGO) Discounts: Offer deals like "Buy one, get one free" or "Buy two, get one at 50% off." These can be configured to apply to specific products or collections.
- Free Shipping Discounts: Provide free shipping when certain conditions are met, such as a minimum order amount (e.g., free shipping on orders over $50). The API supports creating a single free shipping code that can apply internationally.

Conditional Discounts: Discounts can be restricted based on:

- Customer Groups: Target specific customer segments, such as new customers, VIPs, or tagged customers (e.g., "loyal shoppers").
- Minimum Purchase Requirements: Require a minimum order quantity or cart value for the discount to apply (e.g., $100 minimum for 15% off).
- Product or Collection Specificity: Apply discounts only to specific products, variants, or collections.

If these match the kind of discounts you are setting up in SYSPRO then we can drive it from there.

So, for example if it's a certain percentage off of certain products for a time period for a B2C customer we can dynamically build that from data in SYSPRO provided it can be entered that way in SYSPRO.

Regarding Payments – I'd like to discuss that further as they may be different for the UK vs Canada/US.

Subject: RE: Shopify/Syspro Link

Hi Liz,

Yes, sorry. When you were talking about Pricing I immediately thought that was related to customer accounts because generally that's a thing in B2B.

Did you find out what version of Shopify you're using? Is it the Plus platform or the regular Shopify?

So only Shopify Plus has support for advanced pricing. Shopify Plus is hugely expensive, so I'm told. There may still be a cheaper alternative using SparkLayer's Pricing Engine and customer groups.

Let me know about the version first and then we can discuss.

Les

Subject: RE: Shopify/Syspro Link

Hi Les,

I'm sorry unless I'm missing something I think we are not on the same page. I'm initially wanting to set up the Shopify B2C link, so Shopify Website to Syspro, whereby the website is purely one account in Syspro (WEBS01).

Linking to :

1. Stock
2. Pricing
3. Discounts/Promotions – but as per previous email I'm not sure how
4. Payments Bank/Debtors

Subject: RE: Shopify/Syspro Link

Hi Liz,

Our session was to identify licensing requirements for BPA to support a Shopify/SYSPRO application. Kelvin has what he needs to do that.

As for pricing in SYSPRO I would like to suggest that you consider looking at SparkLayer (https://sparklayer.io/). It is a plugin for Shopify that has a great pricing engine and saves you from having to subscribe to Shopify Plus. I use SparkLayer for a customer here in Canada that uses SYSPRO Contract pricing and Trade Promotions. Check out SparkLayer Price Lists - customise your B2B pricing - SparkLayer Docs. Also check out their Discount Engine at SparkLayer B2B Discount Engine - customise your discount rules - SparkLayer Docs

Their Price Lists are organized by name so that promotions are processed first, then contract pricing and then lastly a standard dealer price list. Each B2B customer has a hierarchy of pricelists that are processed in order. This did take some engineering in SYSPRO to ensure the names are in alphabetical order. These are all integrated through BPA to SparkLayer so that you do not need to manage it in multiple places. SYSPRO is always the source of truth.

Also, in this account they use Shopify payments for credit cards. Shopify creates a financial report for each automatic deposit they make to their bank account (generally weekly). We have created a reconciliation report in BPA that is a CSV file that matches the payments to customers and invoices in SYSPRO. They use that to do their weekly reconciliation. It would be possible to create transaction in SYSPRO if you wanted to look at that against your particular needs. We can also integrate with SYSPRO Credit Card Interface. Not sure if that's available in the UK though.

We can setup a demonstration for you of SparkLayer. An implementation of SYSPRO to Shopify/SparkLayer which includes synchronization of Customers, Products, Product Statuses, Orders, Order History (customer portal), Inventory Levels, Price Lists.

Off the top of my head for the professional services you'd be looking at £19,000 – £23,000. Based on what I saw the other day you'll need at least another 25 Tasks and a Shopify Connector. Kelvin will be able to give you a ballpark on that.

I'm happy to meet anytime this week to go over this and I can help in your Shopify/SparkLayer choices to maximize your feature set vs cost.

Regards,

Les

Subject: Shopify/Syspro Link

Good morning both,

Dean said that you had a session last week to understand what you were requesting, have you everything now that is needed on this?

I'm really keen to understand and move on in relation to the potential link between Shopify and Syspro, I have been doing some work on the Trade Promotions in Syspro and can also see in Shopify where this sits, I am not however understanding of where the data is driven from, i.e. do any promotions need to be set-up in Shopify and Syspro but mirror, or sit in one or the other and lookup? Also on the payments I can see these add ones in Shopify, directly to a bank account but I am wondering if Codeless can manage the link back into Syspro Debtors and Bank?

If you could let me know when you are available to give and indication on the scope/timescale and cost of the project that would be great.

Thanks,

Liz
